Controlled design study

Candidate illustration; model selection pending

Policy-visible observations → history encoding → future representation ↔ action generation

Q1 History encoding

Finite, timestamped observations

→ encoder

Compare organization + encoding
Diagnose direction, gaps, occlusion

Q2 Future representation

target-only | **context-only**

uniform | **heterogeneous**

Representation × spatial granularity

Q3 World–action interaction

Action-only / dual / forecast→action

Compare backbone + interaction mask
Auxiliary / online / joint generation

Common protocol: clock · data · supervision boundary · capacity · inference budget
