Timestamped observation history
last observation t
first action applied
execution window
two-view RGB-D + robot/action history
valid timestamps, no reset-frame padding
capture + inference + queue + actuation
measured delay ell(t)
Reactive
current pose -> action
history may be implicit
t-0.4
t-0.2
t
stale target
object now
MISS
target moved during ell(t)
SE(3)-WAM
history -> physical future
metric + uncertainty + action
motion identifiable from history
execution-aligned future
target SE(3) ghosts + 3-D flow
INTERCEPT
action reads forecast
causal audit: zero / swap / noise
